SNAPSHOT
OF CIVIL REGISTRATION AND VITAL STATISTICS SYSTEMS OF
SENEGAL
Program Information

About the Centre of Excellence for CRVS Systems

Housed at the International Development Research Centre (IDRC), the Centre of Excellence for Civil Registration and Vital Statistics (CRVS) Systems is a global knowledge and resource hub that actively supports national efforts to develop, strengthen, and scale CRVS systems. It collaborates with organizations and experts to broker access to information and expertise, including global standards, tools, research evidence, and relevant good practice.

The Centre of Excellence was established with funding from Global Affairs Canada and IDRC and contributes directly to the work of the Global Financing Facility, a key financing platform of the UN Secretary General’s Global Strategy for Women’s, Children’s, and adolescents’ health.

About the International Development Research Centre (IDRC)

Part of Canada’s foreign affairs and development efforts, the IDRC invests in knowledge, innovation and solutions to improve the lives of people in the developing world. IDRC works with many stakeholders including civil society organizations, think tanks, regional organizations and government departments in the developing world to promote growth, reduce poverty, and drive large-scale positive change.

Introduction

The purpose of this report is to provide a brief introduction to the civil registration and vital statistics (CRVS) systems in Senegal. The information was collected through a questionnaire completed by the National Directorate of Civil Registration of Senegal in February 2019 and supplemented by desk research. The report presents country level stakeholders activities and resources available and needed to strengthen CRVS systems, coordination, among others.

Brief country profile

Senegal is located in the far west of the African continent. It is bordered in the north by Mauritania, on the east by Mali, on the South by Guinea Bissau and Guinea, and in the West by the Atlantic Ocean. It surrounds the Gambia on three sides. Topographically it is a flat country, with altitudes rarely exceeding 100 metres. The country is crisscrossed from east to west by four rivers: Senegal, Gambia, Casamance and Saloum and their tributaries. It is covered by Sahelian desert or grasslands in the north and heavier vegetation in the south and southeast.

- Capital city: Dakar
- Official Language: French
- Surface area: 196,722 square kilometres
- Ministry responsible for civil registration: Ministry of Territorial Governance, Development and Spatial Planning.

Disclaimer: The boundaries and names shown and the designations used on this map do not imply official endorsement or acceptance by the United Nations.

- Civil registration agency at the national level: National Directorate of Civil Registration – Le Centre National d’Etat Civil (CNEC).

The population of Senegal was counted as 13,508,715 in the Population and Housing Census of 2013. The population in 2019 was estimated at about 16 million. About 70 percent of Senegal’s population is rural. Senegal has fourteen administrative areas. The list of these areas and their estimated population in 2019 is shown in Table 1.

Civil registration system

Legal framework

The civil registration of Senegal is governed by Law No. 72-61 of 12 June 1972 of the Family Code. Through this code, a system of decentralized organization and operation of the civil registration system was set up and management was conferred to local authorities. This law, which entered into force in January 1973, covers births, marriages and deaths. It is silent on divorces. The law covers all regions of the country and the entire population including foreign nationals and refugees.

The law specifically mentions that a statement of events occurring each quarter (of the year) should be sent to the national statistical office at the end of each quarter for compilation and dissemination.

Management, organization and operations

National CRVS coordinating mechanism

Senegal has a high level national civil registration steering committee. This committee is chaired by the Prime Minister and includes the ministries directly involved in the CRVS systems. The members are: Ministry of Territorial Governance, Development and Territorial Planning; Ministry of Justice; Ministry of Health; National Agency for Statistics and Demography; Ministry of National Education; Ministry of Good Governance and Child Protection; and National Agency of Early Childhood.

A technical committee responsible for developing the national CRVS improvement strategic plan has been set up with membership from each of the ministries represented in the steering committee. The technical committee was set up by a decree of the Minister in charge of civil registration.

Administration level registration centres

In Senegal, civil registration centres are located in the municipalities. The municipality is the lowest level in the administrative hierarchy of the decentralized organization. Senegal has 587 civil registration centres. Each municipality has a main civil registration centre and, if necessary, a secondary centre may be created by order of the Minister in charge of civil status based on a request from the Mayor of the municipality. The mayor is the Chief Civil Registration Officer. The mayor can also delegate the registration activity to one of the councilors or municipal agents. Thus, there are about 1520 local registrars in communes and rural districts (communautés rurales) of Senegal.

A district delegate or a village Chief serves as a civil registration auxiliary and provides notifications of the occurrence of vital events to informants. The municipality issues notebooks to these civil registration auxiliaries for the recording of vital events. For vital events occurring abroad, ambassadors and counsellors serve as registrars.

Accessibility of civil registration services

Most households in Senegal are less than 5 kilometres from the local civil registration centre. Thus, a person can spend less than an hour on average using public transport such as bicycles, motor cycles or carts to get to the civil registration centre in the municipality. On foot, it can take up to four hours for those who live at the furthest distance from the registration centres.

When additional centres are warranted because of population pressure or other reasons, the law allows for the opening of secondary registration offices to improve services. It should also be noted that in each district or village, the district delegate or village chief is authorized to receive declaration of vital events. This saves informants on the time and cost required to visit a civil registration centre.
Registration of vital events

In Senegal, registration of vital events is compulsory and free. Form No. 1 is given free to the informant at the time of the recording of the act.

The issuance of a certificate or a copy of an act for births, deaths and marriages is subject to a fee which varies from 200 CFA francs to 500 CFA francs according to the registration centres. The fees are decided by the Municipal Council of each municipality and in most cases, it amounts to the cost of stamps that need to be affixed on the certificate.

Backlog of unregistered births

Information not available.
Interface with other sectors and operations

In Senegal, several sectors interface with the civil registration activities as producers or users of data. The health sector plays an important role in the registration of vital events. Health workers are involved in raising awareness of the importance of registration of vital events. According to the civil registration law, they are expected to provide notification of the occurrence of births and deaths. In the case of births, the number on the birth certificate of the child is also entered in the health record. With the support from the United Nations Children’s Fund (UNICEF), the notification of the occurrence of births and deaths and the recording of the required and related information on the event is being tested in health facilities in 3 regions of the country. The recorded information is then transmitted to the civil registration officer of the municipality.

Concerning national identification managed by the Ministry of the Interior, a unique national identification number exists and is used on national identity cards, driving licenses, insurance and passport purposes. However, the unique identification number is not linked to the civil registration system.

In addition, there is a quarterly statement for the collection of statistical data. This statement is sent to the appropriate department at the end of each quarter.

Vital statistics system

Vital statistics

The Statistics Act has special provisions for the collection, compilation and dissemination of vital statistics of the civil registration system\(^{15}\).

In ANSD, the Civil Registration and Population Projection Sub-Office is responsible for compiling vital statistics. This sub-office compiles data on live births, marriages and deaths from the vital registration system and other sources. A report on vital statistics was published by ANSD in 2015.\(^{16}\)

Causes of death

Cause of death information is not collected through the vital events registration system. Verbal autopsy tools and other methods are not yet used to collect information on causes of death.

**Digitization**

**Computerization**

Senegal is modernizing its CRVS systems with the support of development partners. In this context, proposals have been made to review and update the existing civil registration legislative and regulatory framework to support the implementation of innovative technologies to improve the registration process. Thus, a bill is ready for amending and supplementing the provisions relating to the civil status of Law No. 72-61 of 12 June 1972 on the Family Code and other related laws.

Computers are currently used in the registration of vital events at some of the country’s civil registration centres. Currently, there are more than 100 computerized civil registration centres in both urban and rural areas. These centres have local servers as well as external media, such as hard disks and flash disks, for backups of recorded data and for the transfer of data to the national civil registration office.

**Mobile technology application**

In order to capture and register all vital events, the Government of Senegal with the support of UNICEF is experimenting with the integration of mobile telephones between health facilities and civil registration offices. An application called RAPIDPRO is implemented in regions in southern Senegal. As a first step, RAPIDPRO was used for birth notification by health workers. Telephones are now used in the capture of birth registration information at the local civil registration centres, particularly in the Kolda region.

**Sample registration forms**

Sample registration forms not available online.
**Improvement initiatives and external support**

**Improvement plans and budget**

*Strategic plan*

Senegal is yet to develop a CRVS improvement strategic plan. A comprehensive assessment is planned to understand the current strengths and weaknesses of the CRVS systems of Senegal. The recommendations that will emanate from the assessment will be the major input in the development of a strategic plan for the improvement of the country’s CRVS systems.

**Budgetary allocations and requirements**

Information was not available on the current budget requirement and government allocations.

**Support from development partners**

The Senegalese government is supported in its effort to improve and modernize its CRVS systems by several development partners such the European Union, UNICEF, Spanish Cooperation, Austrian Cooperation and ECA. These partners are expected to be involved in all phases of the improvement process assessment, strategy development and strategy implementation.

Partners such as the European Union are supporting the establishment of a national database linked to the identity card. This requires the computerization of all the centres as well as the training of the agents in local registration offices and the capacity building of the National Office of Civil Registration staff. It also aims to improve the quality of services at the vital statistics centres and to allow the collection and transmission of data in a simple and continuous manner. UNICEF is supporting the integration of mobile telephones for the transmission of vital events and related information.

Proposals to improve coordination of activities

The National Office of Civil Registration has provided the following proposals to improve the coordination activities among key national CRVS stakeholders and between national offices and development partners.

National CRVS stakeholders

a. Strengthen the existing national coordinating mechanism; and
b. National institutions involved with civil registration activities need to be mindful of their responsibilities.

National institutes and development partners

a. Inform the National Office for Civil Registration before the implementation of any activity related to civil registration in the country;
b. Work with the National Office for Civil Registration to better target the actions and priorities meant to improve CRVS systems; and
c. Put in place a mechanism for the harmonization of partners’ support and interventions to improve CRVS systems in the country.

Additional Materials

Conclusions

The National Agency for Civil Registration is working with development partners and national actors to modernize the CRVS systems. As CRVS systems cut across several sectors of government, it is critical to have working coordination among the key national actors that need to be actively involved. Senegal has a well-defined existing coordination mechanism compared to many African countries. However, the coordination is currently rather weak and needs to be reinvigorated. The success of CRVS systems is also dependent on a well-structured and organized anchor agency for civil registration. In this context, it is important to strengthen and empower the national agency responsible for civil registration. ANSD is well organized but it needs to be strengthened and work with CEPAL and MOH towards the production of reliable and timely CR-based vital statistics.

Since 2012, many African countries have developed a costed strategic and action plan following the recommendations of the second Conference of Ministers Responsible for Civil Registration. Senegal is poised to join the other countries. In order to respond to the needs of the public and requirements of the government, it is imperative to conduct a well-designed comprehensive assessment that is tailored to the needs of the country and investigates the supply and demand sides of CRVS system. A well-designed assessment is a prerequisite for an informed strategic plan.
Endnotes

3 Birth or death registration completeness means the actual number of registered births or deaths divided by the estimated number of births or deaths in a particular country or area, in a specified time period usually a year. For further reading refer to ECA, ESCAP and Statistics Norway (2016).

5 DPT: Surviving infants who received the first dose of diphtheria, pertussis and tetanus (DPT) vaccine.
